

Daily problem - 3

1. Convert days into years, weeks, Days.

1 year = 365 days
 week = 7 days
 $y = \text{tot} / 365$
 $r = \text{tot} \% 365$
 $w = r / 7$
 $d = r \% 7$

Output:

952

y = 2

w = 1

d = 3

2. Days of week :

day2ndix = (day + month * year + leapyear * 4) % 7

0 = Sunday

1 = Monday

2 = Tuesday

3 = Wednesday

4 = Thursday

5 = Friday

6 = Saturday

Output:

31/1/1999 -> Saturday

3. Find student avg.

Total avg = tot

staff avg = sta

non-teach = sta / 3

stu = tot - sta - non-teach

Output:

20000

30000

Teach = 1334

non-Teach = 666

stu = 24000

4. No. of Factors & nth Factor.

for (i=0; i<n; i++)

if (n% i == 0)

if (count == n),

count++

} Factors;

Output:

12

4

count = 6

nth Factor = 4.

if (count > n)

count

(Factor) \rightarrow print.

4. N prime number after nth prime

For i=2 to 52

If ($n \neq i = 0$) \rightarrow not prime.

print next N prime number after it.

5. perfect square with digit sum ≤ 10

$$\sqrt{n} + \sqrt{n} = n$$

digit sum + digit

$$\text{sum} + n \% 10$$

$$n / 10$$

if (digit sum ≤ 10) print(n)

6. Unique permutations of numbers:

$n!$ (Factorial)

$n = \text{remaining.length}()$

if ($n = 0$) permutation.add(prefix)

i=0; i<n; i++

prefix + remaining.charAt(i);

7. Array with prime square:

lower, upper -

size = upper - lower + 1;

for (i=0; i < size; i++) {

int sum = lower + i;

result [i][0] = num;

result [i][1] = num * num;

Output:

7

2 3 5 7 11 13 17

Output:

5, 15

Output:

8. Bank acc:

bal = bal + deposit

i P(bal - withdraw ≥ 0)

bal = bal - withdraw

else reject

bal ≥ 500.

Output:

Name: Madhuri

Acc no: 192465036

Type: Savings

BD: 28000

9. Rev & add

rev = rev * 10 + lastdigit

lastdigit = n % 10

n /= 10

n := rev

now n = n + rev(n)

& repeat

Output:

153

153 + 351 = 504

504 + 405 = 909

10. Synchronizations inter thread communication:

i P(withdraw amt > bal)

wait()

bal = bal - dep

notify()

bal = bal - withdraw

Output:

deposited 3007.1

withdraw: 1500 - 3

Total = 1506.8
